

4 Graphs

Custom (user defined) graphs allow the creation of complex graphs.

These graphs, once configured, can be easily accessed via Monitoring→Graphs.

Configuration of custom graphs can be accessed by navigating to Configuration→Templates or Configuration→Hosts and clicking on *Graphs* link for corresponding template or host.

When creating a new graph, first item can be added from any template or host. Then, depending on the choice, further items can be added :

1. if the first item was from a template, only from that template;
2. if the first item was from any host, from any host (but not from templates anymore)
