

5 Actions

Overview

In the *Configuration* → *Actions* section users can configure and maintain actions.

A listing of existing actions with their details is displayed. The actions displayed are actions assigned to the selected event source (triggers, discovery, auto-registration).

To view actions assigned to a different event source, change the source from the dropdown to the right in the *Actions* bar.

For users without Super-admin rights actions are displayed according to permission settings. That means in some cases a user without Super-admin rights isn't able to view the complete action list because of certain permission restrictions. An action is displayed to the user without Super-admin rights if the following conditions are fulfilled:

- The user has read-write access to all selected elements in the new condition (host, host group, trigger, etc.);
- The user is a member of all the user groups notifications are sent to. Otherwise this user will not be able to view this action.

Displayed data:

Column	Description
Name	Name of the action. Clicking on the action name opens the action configuration form .
Conditions	Action conditions are displayed.
Operations	Action operations are displayed. Since Zabbix 2.2, the operation list also displays the media type (e-mail, SMS, Jabber, etc) used for notification as well as the name and surname (in parentheses after the alias) of a notification recipient.
Status	Action status is displayed - <i>Enabled</i> or <i>Disabled</i> . By clicking on the status you can change it. If an action is disabled during an escalation in progress (like a message being sent), the message in progress will be sent and then one more message on the escalation will be sent. The follow-up message will have the following text at the beginning of the message body: <i>NOTE: Escalation cancelled: action '<Action name>' disabled</i> . This way the recipient is informed that the escalation is cancelled and no more steps will be executed.

To configure a new action, click on the *Create action* button in the top right-hand corner.

Mass editing options

A dropdown below the list offers some mass-editing options:

- *Enable selected* - change the action status to *Enabled*
- *Disable selected* - change the action status to *Disabled*
- *Delete selected* - delete the actions

To use these options, mark the check-boxes before the respective actions, then select the required option and click on “Go”.
