

4 Agent installation

This page covers installation of Zabbix agent. If needed, you may check additional info about [supported platforms](#) and [permission requirements](#) for the agent.

Red Hat Enterprise Linux / CentOS

To install agent after correct [repository configuration package](#) is installed, run the following command:

```
# yum install zabbix-agent
```

Now agent is ready to be started by:

```
# systemctl start zabbix-agent
```

Debian / Ubuntu

To install agent after correct [repository configuration package](#) is installed, run the following command:

```
# apt-get install zabbix-agent
```

Now agent is ready to be started by:

```
# service zabbix-agent start
```

Precompiled Windows and MacOS agents

Zabbix Windows agent can be installed from Windows MSI installer packages (32-bit or 64-bit) available for [download](#).

Zabbix Mac OS agent can be installed from PKG installer packages available for [download](#). Versions with or without encryption are available.
