

## 23 Upgrade notes for 3.0.13

### More secure Zabbix setup

Several features have been implemented as part of an effort to “harden” the Zabbix web interface:

- Same origin policy for IFrames. Zabbix now cannot be placed in frames on a different domain. Still, pages placed into a Zabbix frame will have access to Zabbix frontend (through JavaScript) if the page that is placed in the frame and Zabbix frontend are on the same domain. A page like <http://secure-zabbix.com/cms/page.html>, if placed into screens on <http://secure-zabbix.com/zabbix/>, will have full JS access to Zabbix.
- Technical errors (PHP/SQL) are now hidden by default from non-Zabbix Super admin users and from users that are not part of user groups with [debug mode](#) enabled. This is configurable via the new `ZBX_SHOW_TECHNICAL_ERRORS` [constant](#), set to 'false' by default.

### Item changes

- **system.cpu.num** agent item on AIX now returns a value based on the logical processors attached to an AIX LPAR and not the physical ones.
