

15 Upgrade notes for 3.0.5

Frontend changes

- The behavior of “Triggers status” filter in “Monitoring” → “Triggers” and “Monitoring” → “Overview” was changed to always remember its value, even if it is “All”. On large installations, if you select “All” and you become stuck with these pages taking a very long time to load because of an overwhelming amount of data to process, you can reset the filter by replacing URL parameters with `?filter_rst=1`.
