

8 Setting time periods

10.3.1 Format

To set a time period, the following format has to be used:

```
d-d, hh:mm-hh:mm
```

You can specify more than one time period using a semicolon (;) separator:

```
d-d, hh:mm-hh:mm;d-d, hh:mm-hh:mm...
```

10.3.2 Description

Symbol	Description
d	Day of the week: 1 - Monday, 2 - Tuesday ,... , 7 - Sunday
hh	Hours: 00-24
mm	Minutes: 00-59

10.3.3 Default

Empty time period specification equals 01-07,00:00-24:00, which is the default value.

The upper limit of a time period is not included. Thus, if you specify 09:00-18:00 the last second included in the time period is 17:59:59. This is true starting from version 1.8.7, for everything, while [Working time](#) has always worked this way.

10.3.4 Examples

Working hours. Monday - Friday from 9:00 till 18:00:

```
1-5,09:00-18:00
```

Working hours plus weekend. Monday - Friday from 9:00 till 18:00 and Saturday, Sunday from 10:00 till 16:00:

```
1-5,09:00-18:00;6-7,10:00-16:00
```
