

6 Media types

Overview

In the *Administration* → *Media types* section users can configure and maintain media type information.

Media type information contains general instructions for using a medium as delivery channel for notifications. Specific details, such as the individual e-mail addresses to send a notification to are kept with individual users.

A listing of existing media types with their details is displayed.

Displayed data:

Column	Description
Name	Name of the media type. Clicking on the name opens the media type configuration form .
Type	Type of the media (e-mail, SMS, etc) is displayed.
Status	Media type status is displayed - <i>Enabled</i> or <i>Disabled</i> . By clicking on the status you can change it.
Used in actions	All actions where the media type is used directly (selected in the <i>Send only to</i> dropdown) are displayed. Clicking on the action name opens the action configuration form.
Details	Detailed information of the media type is displayed.

To configure a new media type, click on the *Create media type* button in the top right-hand corner.

Mass editing options

Buttons below the list offer some mass-editing options:

- *Enable* - change the media type status to *Enabled*
- *Disable* - change the media type status to *Disabled*
- *Delete* - delete the media types

To use these options, mark the checkboxes before the respective media types, then click on the required button.

Filter

As the list may contain a number of media types, it may be needed to filter out the ones you really need.

The *Filter* link is available above the list of media types. If you click on it, a filter becomes available where you can filter media types by name and status.

The screenshot shows a filter interface with a 'Filter' dropdown menu. Below it, there is a 'Name' input field and a 'Status' section with three buttons: 'Any' (selected), 'Enabled', and 'Disabled'. At the bottom, there are 'Apply' and 'Reset' buttons.
