

## 5 Actions

### Overview

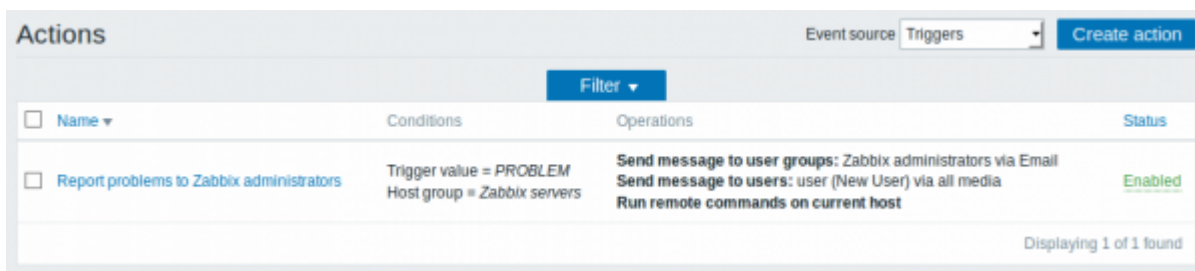

In the *Configuration* → *Actions* section users can configure and maintain actions.

A listing of existing actions with their details is displayed. The actions displayed are actions assigned to the selected event source (triggers, discovery, auto-registration).

To view actions assigned to a different event source, change the source from the dropdown to the right in the *Actions* bar.

For users without Super-admin rights actions are displayed according to permission settings. That means in some cases a user without Super-admin rights isn't able to view the complete action list because of certain permission restrictions. An action is displayed to the user without Super-admin rights if the following conditions are fulfilled:

- The user has read-write access to host groups, hosts, templates and triggers in action conditions
- The user has read-write access to host groups, hosts and templates in action operations and recovery operations
- The user has read access to user groups and users in action operations and recovery operations

Displayed data:

Column	Description
Name	Name of the action. Clicking on the action name opens the action <a href="#">configuration form</a> .
Conditions	Action conditions are displayed.
Operations	Action operations are displayed. Since Zabbix 2.2, the operation list also displays the media type (e-mail, SMS, Jabber, etc) used for notification as well as the name and surname (in parentheses after the alias) of a notification recipient.
Status	Action status is displayed - <i>Enabled</i> or <i>Disabled</i> . By clicking on the status you can change it. See the <a href="#">Escalations</a> section for more details as to what happens if an action is disabled during an escalation in progress.

To configure a new action, click on the *Create action* button in the top right-hand corner.

### Mass editing options

Buttons below the list offer some mass-editing options:

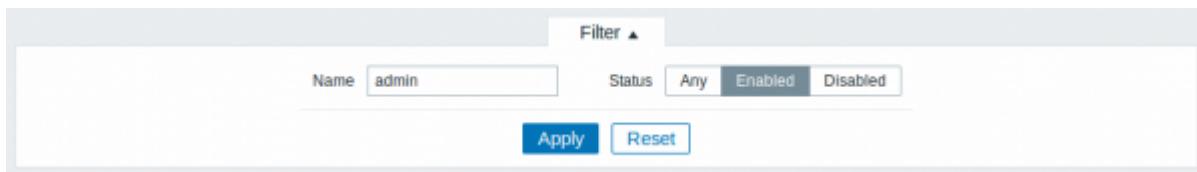

- *Enable* - change the action status to *Enabled*
- *Disable* - change the action status to *Disabled*
- *Delete* - delete the actions

To use these options, mark the checkboxes before the respective actions, then click on the required button.

## Filter

As the list may contain a number of actions, it may be needed to filter out the ones you really need.

The *Filter* link is available above the list of actions. If you click on it, a filter becomes available where you can filter actions by name and status.

The screenshot shows a filter interface with the following elements:

- A dropdown menu labeled "Filter" with a small triangle icon.
- An input field for "Name" containing the text "admin".
- A "Status" dropdown menu with three options: "Any", "Enabled", and "Disabled". The "Enabled" option is currently selected.
- Two buttons: "Apply" (highlighted in blue) and "Reset".
