

# 8 Screens

## Overview

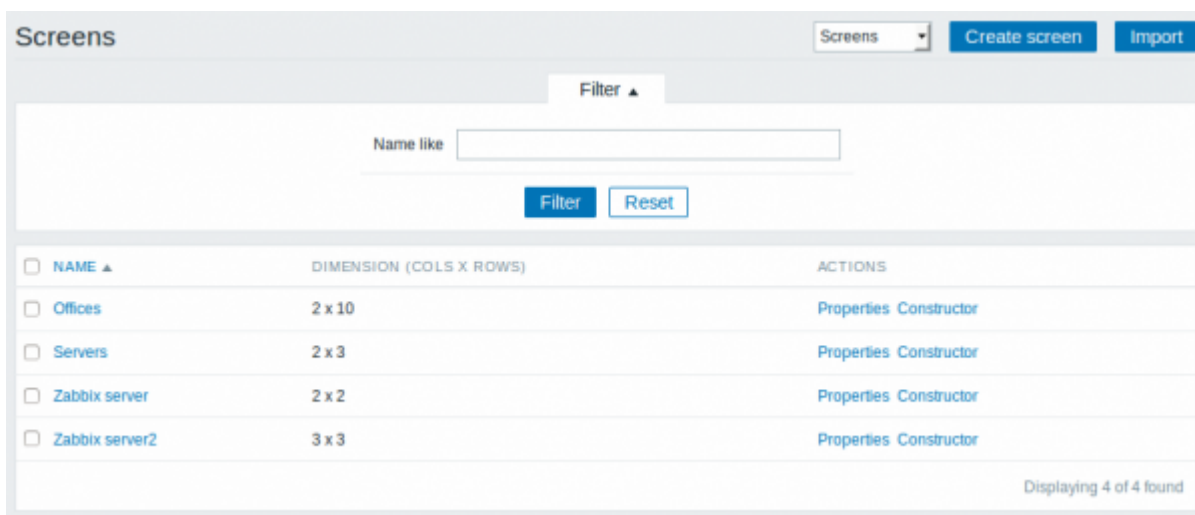

In the *Monitoring* → *Screens* section you can configure, manage and view Zabbix [screens](#) and [slide shows](#).

When you open this section, you will either see the last screen/slide show you accessed or a listing of all entities you have access to. Screen/slide show listing can be filtered by name.

Since Zabbix 3.0 all screens/slide shows can be either public or private. The public ones are available to all users, while private ones are accessible only to their owner and the users the entity is shared with.

Use the dropdown in the title bar to switch between screens and slide shows.

## Screen listing

Displayed data:

Column	Description
<i>Name</i>	Name of the screen. Click on the name to <a href="#">view</a> the screen.
<i>Dimensions</i>	The number of columns and rows of the screen.
<i>Actions</i>	Two actions are available: <b>Properties</b> - edit general screen <a href="#">properties</a> (name and dimensions) <b>Constructor</b> - access the grid of screen <a href="#">elements</a> for editing

To [create](#) a new screen, click on the *Create screen* button in the top right-hand corner. To import a screen from an XML file, click on the *Import* button in the top right-hand corner. The user who imports the screen will be set as its owner.

## Mass editing options

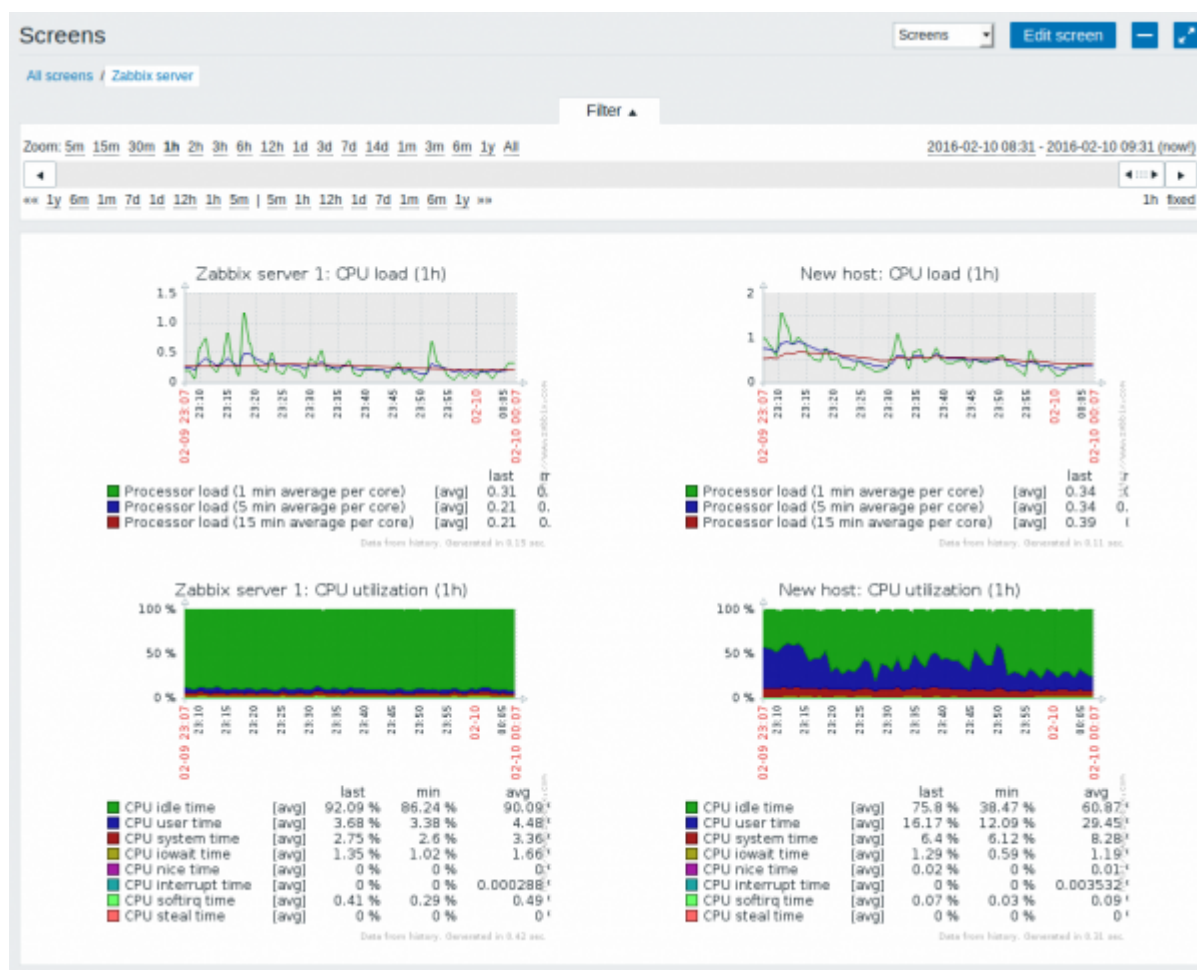

Buttons below the list offer some mass-editing options:

- *Export* - export the screens to an XML file
- *Delete* - delete the screens

To use these options, mark the checkboxes before the respective screens, then click on the required button.

## Viewing screens

To view a screen, click on its name in the list of all screens.

## Time period selector

The filter section above the screen contains a time period selector. It allows you to select the desired time period easily, affecting the data displayed in graphs etc.

## Controls

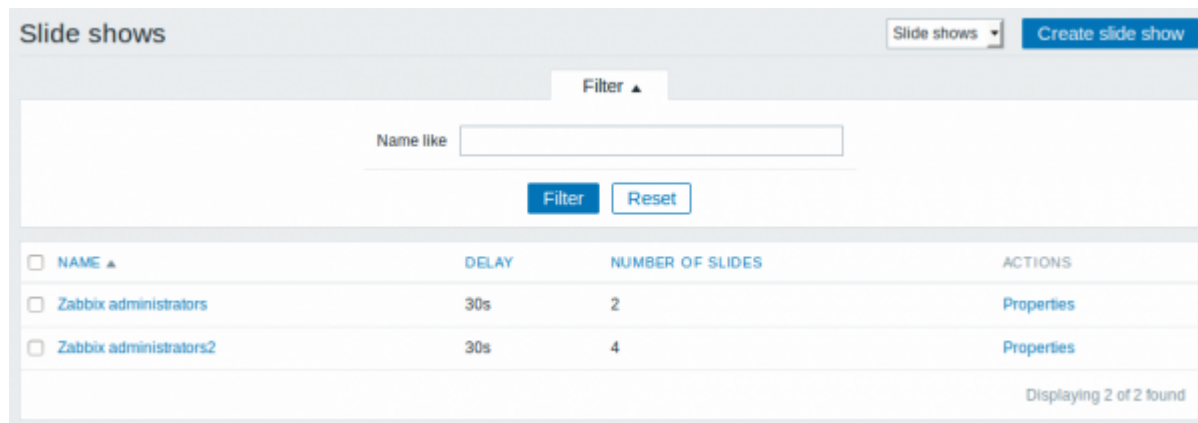

Three control buttons are available in the title bar:

- **Edit screen** - go to screen constructor to edit the screen
- **+** - add screen to the favourites widget in the [Dashboard](#)

-  - use the full browser window to display the screen

### Slide show listing

Use the dropdown in the title bar to switch from screens to slide shows.

Displayed data:

Column	Description
Name	Name of the slide show. Click on the name to <a href="#">view</a> the slide show.
Delay	The default duration of showing one slide is displayed.
Number of slides	The number of slides in the slide show is displayed.
Actions	One action is available: <b>Properties</b> - edit slide show <a href="#">properties</a>

To [create](#) a new slide show, click on the *Create slide show* button in the top right-hand corner.

### Mass editing options

A button below the list offers one mass-editing option:

- *Delete* - delete the slide shows

To use this option, mark the checkboxes before the respective slide shows and click on *Delete*.

### Viewing slide shows

To view a slide show, click on its name in the list of all slide shows.

### Controls

Four control buttons are available in the title bar:

-  - go to slide show properties
-  - add slide show to the favourites widget in the [Dashboard](#)

-  - use the full browser window to display the slide show
-  - slow down or speed up a slide show

## Referencing a screen

Screens can be referenced by both `elementid` and `screenname` GET parameters. For example,

```
http://zabbix/zabbix/screens.php?screenname=Zabbix%20server
```

will open the screen with that name (Zabbix server).

If both `elementid` (screen ID) and `screenname` (screen name) are specified, `screenname` has higher priority.
