

9 Template changes

This page lists all changes to the stock templates that are shipped with Zabbix. It is suggested to modify these templates in existing installations - depending on the changes, it can be done either by [importing](#) the latest official version or by performing the change manually.

Template changes in 3.4.0

A `zabbix[process,task manager,avg,busy]` task manager process monitoring item with a corresponding trigger has been added to the Template App Zabbix Server template.

Template changes in 3.4.2

A `zabbix[preprocessing_queue]` preprocessing queue monitoring item has been added to Template App Zabbix Server along with a corresponding graph/screen element.

Template changes in 3.4.9

The logic of the Interface `{#IFMACRO}`: Link down trigger prototype in several SNMP module templates (e.g. Template Module Interfaces SNMPv2) has been fixed by adding a recovery expression that does not allow this trigger to resolve prematurely. For details, see: [ZBX-13278](#).
