

## 5 Actions

### Overview

In the *Configuration* → *Actions* section users can configure and maintain actions.

A listing of existing actions with their details is displayed. The actions displayed are actions assigned to the selected event source (triggers, discovery, auto-registration).

To view actions assigned to a different event source, change the source from the dropdown to the right in the *Actions* bar.

For users without Super-admin rights actions are displayed according to permission settings. That means in some cases a user without Super-admin rights isn't able to view the complete action list because of certain permission restrictions. An action is displayed to the user without Super-admin rights if the following conditions are fulfilled:

- The user has read-write access to host groups, hosts, templates and triggers in action conditions
- The user has read-write access to host groups, hosts and templates in action operations, recovery operations and acknowledgement operations
- The user has read access to user groups and users in action operations, recovery operations and acknowledgement operations

Displayed data:

Column	Description
<i>Name</i>	Name of the action. Clicking on the action name opens the action <a href="#">configuration form</a> .
<i>Conditions</i>	Action conditions are displayed.
<i>Operations</i>	Action operations are displayed. Since Zabbix 2.2, the operation list also displays the media type (e-mail, SMS, Jabber, etc) used for notification as well as the name and surname (in parentheses after the alias) of a notification recipient. Action operation can both be a <a href="#">notification</a> or a <a href="#">remote command</a> depending on the selected type of operation.
<i>Status</i>	Action status is displayed - <i>Enabled</i> or <i>Disabled</i> . By clicking on the status you can change it. See the <a href="#">Escalations</a> section for more details as to what happens if an action is disabled during an escalation in progress.

To configure a new action, click on the *Create action* button in the top right-hand corner.

## Mass editing options

Buttons below the list offer some mass-editing options:

- *Enable* - change the action status to *Enabled*
- *Disable* - change the action status to *Disabled*
- *Delete* - delete the actions

To use these options, mark the checkboxes before the respective actions, then click on the required button.

## Filter

As the list may contain a number of actions, it may be needed to filter out the ones you really need.

The *Filter* link is available above the list of actions. If you click on it, a filter becomes available where you can filter actions by name and status.

The screenshot shows a filter interface with a 'Filter' dropdown menu. Below it, there is a 'Name' input field with the text 'admin' and a 'Status' dropdown menu with three options: 'Any', 'Enabled', and 'Disabled'. At the bottom of the filter area, there are two buttons: 'Apply' and 'Reset'.
