

5 Actions

Overview

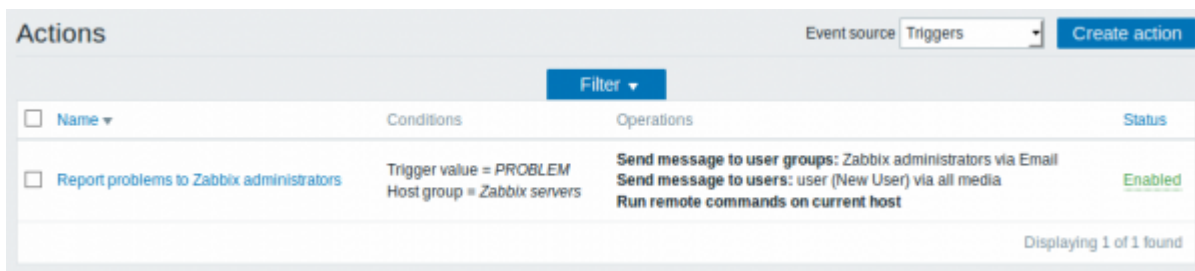

In the *Configuration* → *Actions* section users can configure and maintain actions.

A listing of existing actions with their details is displayed. The actions displayed are actions assigned to the selected event source (triggers, discovery, auto-registration).

To view actions assigned to a different event source, change the source from the dropdown to the right in the *Actions* bar.

For users without Super-admin rights actions are displayed according to permission settings. That means in some cases a user without Super-admin rights isn't able to view the complete action list because of certain permission restrictions. An action is displayed to the user without Super-admin rights if the following conditions are fulfilled:

- The user has read-write access to host groups, hosts, templates and triggers in action conditions
- The user has read-write access to host groups, hosts and templates in action operations, recovery operations and acknowledgement operations
- The user has read access to user groups and users in action operations, recovery operations and acknowledgement operations

Displayed data:

Column	Description
<i>Name</i>	Name of the action. Clicking on the action name opens the action configuration form .
<i>Conditions</i>	Action conditions are displayed.
<i>Operations</i>	Action operations are displayed. Since Zabbix 2.2, the operation list also displays the media type (e-mail, SMS, Jabber, etc) used for notification as well as the name and surname (in parentheses after the alias) of a notification recipient.
<i>Status</i>	Action status is displayed - <i>Enabled</i> or <i>Disabled</i> . By clicking on the status you can change it. See the Escalations section for more details as to what happens if an action is disabled during an escalation in progress.

To configure a new action, click on the *Create action* button in the top right-hand corner.

Mass editing options

Buttons below the list offer some mass-editing options:

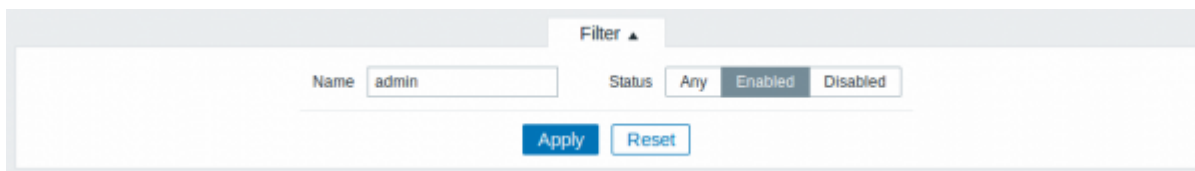

- *Enable* - change the action status to *Enabled*
- *Disable* - change the action status to *Disabled*
- *Delete* - delete the actions

To use these options, mark the checkboxes before the respective actions, then click on the required button.

Filter

As the list may contain a number of actions, it may be needed to filter out the ones you really need.

The *Filter* link is available above the list of actions. If you click on it, a filter becomes available where you can filter actions by name and status.

The screenshot shows a filter interface with a 'Filter' dropdown menu. Below it, there is a 'Name' input field with the text 'admin' and a 'Status' dropdown menu with three options: 'Any', 'Enabled', and 'Disabled'. At the bottom of the filter section, there are two buttons: 'Apply' and 'Reset'.
