

11 What's new in Zabbix 4.0.6

Windows MSI agent packages

Windows MSI installer packages for Zabbix Windows agent are available for [download](#).

Date and time on hover in graph widget

Date and time is now also displayed, in addition to displaying item values, when hovering over a point in time in the graph [widget](#). Note that this is the date and time of the point in graph, not of the actual values. However, this change still allows to know more precisely when something (e.g. a peak) happened:

Item changes

- A 'mode' parameter has been added to the `vmware.eventlog[]` item [key](#), used in monitoring VMware environments, allowing to optionally specify skipping of older log data. See also: [Template changes](#).
- Support of IPv6 addresses has been added to the first parameter of the `net.dns[]` Zabbix agent [item](#).

Frontend changes

- The *Info* column is now also displayed in the item list for template items. Previously it was only displayed in the host item list.
- The [Trigger menu](#) is now also accessible by clicking on the trigger information in the event detail page:

Event details

Trigger details		Actions	
Host	My host	Step	Time
Trigger	Processor load is too high on My host		2019-04-
Severity	Warning	TRIGGER	
Problem expression	{My host:system.cpu.load[1]}	Problems	
Recovery expression		Description	
Event generation	Normal	Configuration	
Allow manual close	No	HISTORY	
		Processor load (1 min average per core)
