

## Zabbix API changes in 4.4

### 4.4.1

#### Breaking changes:

##### host.get

[ZBX-12943](#) removed `withInventory` flag because the host's object field `inventory_mode` is no longer (*writeonly*). Now, instead of using `withInventory` flag, you can filter hosts by `inventory_mode` to achieve the same effect.

#### Backward compatible changes:

##### host

Changes:

[ZBX-12943](#) changed `inventory_mode` object to be a part of host object

##### hostprototype

Changes:

[ZBX-12943](#) changed `inventory_mode` object to be a part of hostprototype object
