

2 Actions

Overview

If you want some operations taking place as a result of events (for example, notifications sent), you need to configure actions.

Actions can be defined in response to events of all supported types:

- Trigger events - when trigger status changes from *OK* to *PROBLEM* and back
- Discovery events - when network discovery takes place
- Auto registration events - when new active agents auto-register (or host metadata changes for registered ones)
- Internal events - when items become unsupported or triggers go into an unknown state

Configuring an action

To configure an action, do the following:

- Go to *Configuration* → *Actions*
- From the *Event source* dropdown select the required source
- Click on *Create action*
- Name the action
- Choose [conditions](#) upon which operations are carried out
- Choose the [operations](#) to carry out
- Choose the [recovery operations](#) to carry out

General action attributes:

Actions

[Action](#)
[Operations](#)
[Recovery operations](#)
[Update operations](#)

* Name

Type of calculation A and B

Label	Name
A	Problem is not suppressed
B	Host group equals Zabbix servers

New condition

[Add](#)

Enabled

* At least one operation, recovery operation or update operation must exist.

All mandatory input fields are marked with a red asterisk.

Parameter	Description
<i>Name</i>	Unique action name.
<i>Type of calculation</i>	Select the evaluation option for action conditions (with more than one condition): And - all conditions must be met Or - enough if one condition is met And/Or - combination of the two: AND with different condition types and OR with the same condition type Custom expression - a user-defined calculation formula for evaluating action conditions.
<i>Conditions</i>	List of action conditions.
<i>New condition</i>	Select a new action condition and click on <i>Add</i> .
<i>Enabled</i>	Mark the checkbox to enable the action. Otherwise it will be disabled.
