

10 Setting time periods

Overview

To set a time period, the following format has to be used:

```
d - d , hh : mm - hh : mm
```

where the symbols stand for the following:

Symbol	Description
<i>d</i>	Day of the week: 1 - Monday, 2 - Tuesday ,... , 7 - Sunday
<i>hh</i>	Hours: 00-24
<i>mm</i>	Minutes: 00-59

You can specify more than one time period using a semicolon (;) separator:

```
d - d , hh : mm - hh : mm ; d - d , hh : mm - hh : mm . . .
```

Leaving the time period empty equals 01-07,00:00-24:00, which is the default value.

The upper limit of a time period is not included. Thus, if you specify 09:00-18:00 the last second included in the time period is 17:59:59. This is true starting from version 1.8.7, for everything, while [Working time](#) has always worked this way.

Examples

Working hours. Monday - Friday from 9:00 till 18:00:

```
1 - 5 , 09 : 00 - 18 : 00
```

Working hours plus weekend. Monday - Friday from 9:00 till 18:00 and Saturday, Sunday from 10:00 till 16:00:

```
1 - 5 , 09 : 00 - 18 : 00 ; 6 - 7 , 10 : 00 - 16 : 00
```
